

List Server for Domino (LSD)

Some Experiences ...

... were meant to be **Shared !**

Man, it used to be such a **drag administering our Domino e-mail** network. I was always getting hassled to create this or that new mail group, "add these people to this group" or "delete those users from that group". Hey, don't get me wrong, I know that like e-mail is this powerful business tool, but I was spending so much time that it was seriously cutting into my leisure time (if you catch my drift).

Then a friend of mine turned me on to **List Server for Domino: a honest-to-goodness list server**, written as a **native Notes application**. Since it's a Notes application, it fits right into our existing Domino environment. It installs in no time, and with list administration being handled by the program, the overhead for maintaining our lists is non-existent. Groovy!

List Server for Domino is a snap to use! Even **folks that have never used a listserver before can get into the swing of things**. Dig this: they simply send a message with "**HELP**" in the message body, and List Server for Domino responds with a helpful message clueing them into the commands they need. And since the masses already know how to cope with e-mail, I don't need to stress out trying to teach them some new program. All I do is set up their list, and let them go with the flow!

Check this out: **List Server for Domino** can even send **posts** to you **in digest format**. This means that **you receive only one message** that contains all of the correspondence that occurred on the list during a pre-determined time period. **Individual messages that are posted will be collected and sent to you as a single message**, thereby saving you from the perils of heavy mailbox traffic. Cool!

And the cats at Bright Ideas Software are also hip to our budgetary constraints too! **List Server for Domino doesn't have any complicated licensing or user limitations**, like other products that we checked out. You get the whole enchilada for \$2,000 . Compared to other solutions out there, this is practically a steal (but hey, those Bright Ideas Software dudes gotta' eat too!). **No limits, no hassles, no problem.**

Thanks to List Server for Domino, I'm able to give the power back to the people. You should definitely "expand your mime", and put **List Server for Domino to work in your messaging environment**. After all, some experiences were meant to be shared!

Commands

- ▶ Support for standard List Server commands:
 - **Subscribe / Sub**
 - **Unsubscribe / Signoff**
 - **Digest**
 - **Lists**
 - **Help**
 - **Set**
 - **Conceal**
 - **Quit**
 - **Information**
 - NEW! **Who**
 - NEW! **Which**

What's New

- ▶ **Internationalization:** Configure the list server and lists in a language other than English
- ▶ **Personalized Messages:** Using our List Server-based form, list administrators can send out messages to the list, and have ANY text within the body of the mail message personalized for that recipient.
- ▶ **Pre-flight configuration** check. Now LSD makes sure that all of its configuration requirements have been met.
- ▶ **Self-signing** database and template
- ▶ **Bulk** Subscribe
- ▶ **Delete** Lists
- ▶ **New** administrative look & feel
- ▶ **Pop-up**, context-sensitive help.
- ▶ List and List Server **Managers**.

Features

- ▶ A true Notes application.
 - ▶ Create an **UNLIMITED*** number of list.
 - ▶ Database design not hidden to allow for customizing Views and Forms...
 - ▶ Configurable Message Filtering on a per-list basis, prevents Out of Office Agents and Server error messages from spamming.
 - ▶ Enforce list access to subscribers only
 - ▶ Configurable List Template Path
 - ▶ Configurable message header and footer for each list.
 - ▶ Configurable Digest separator for each list.
 - ▶ Public and Private lists.
 - ▶ Moderated and UnModerated lists.
- ▶ Support for attachments in list messages.
 - ▶ Configurable Help message for each list.
 - ▶ Maximum number of subscribers configurable on a per-list basis.
 - ▶ Supported commands configurable on a per-list basis.
 - ▶ Automatic Generation of the List Database from a Template.
 - ▶ Configurable selection of Subject Line OR Message Body as the List Command Carrier.
 - ▶ Multiple Subscribes or Unsubscribes within a single message body.
 - ▶ Statistics on Commands sent to the list server: by Command and by List.
 - ▶ Help command descriptions fully customizable.
 - ▶ Mail List Archive accessible via a standard web browser or Notes client.
 - ▶ Supports cross-platform subscribers.
 - ▶ Works with Notes Mail and all popular Internet Mail Clients.
 - ▶ Tight Integration with the SMTP and POP3 Domino Server Tasks.
 - ▶ Extensive Documentation.
 - ▶ No imposed* or artificial limits as to the number of users per list.
 - ▶ Cascading Groups in Domino Public Name & Address Book allow you to create extremely large lists, with literally hundreds of thousands* of participants.
 - ▶ Status Icons in the List Server and List databases, providing a visual indication of when agents have processed incoming messages.
 - ▶ Configurable List Database Path and Root Database Name
 - ▶ Messages forwarded to List Administrator of a Moderated List indicate that they are from a list and if the message originator is a subscriber to that list.
 - ▶ Ability to send or suppress a customized "Welcome" message to new subscribers.

* Physical Disk and limitation attributed to Domino data base sizes apply. Demo and Trial versions of LSD WILL be limited to the number of lists and users allowed per list.
